FEATURED CASE STUDY

# Design-led. AI-assisted. Built to evolve.

A reusable approach to interactive experience design

## THE OPPORTUNITY

Translate complex learning requirements into intuitive, functional experiences without losing visual consistency, accessibility, or creative direction.

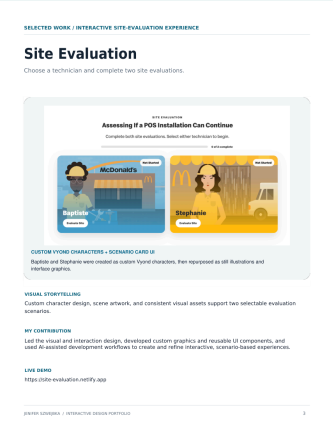

## MY CONTRIBUTION

Visual and interaction design, custom graphics, reusable UI patterns, AI-assisted prototyping, iterative refinement, and functional review.

**FEATURED EXPERIENCE / SITE EVALUATION**

site-evaluation.netlify.app

# Different challenges.
# A consistent design approach.

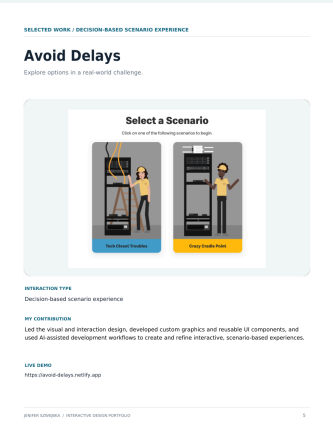

## Site Evaluation

Character-led storytelling and two technician scenarios

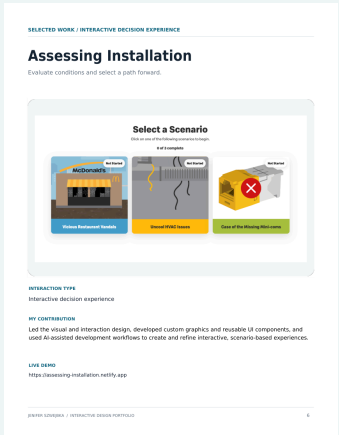

## Approach Challenges

Four choices, guided progression, and visual feedback

## Avoid Delays

Two decision scenarios with contextual exploration

## Assessing Installation

Three technical scenarios using reusable patterns

Each experience uses shared principles while supporting distinct content and behavior.

# From requirements to working experiences.

**01**

### UNDERSTAND

Audience, user decisions, requirements, constraints

**02**

### DESIGN

Visual hierarchy, interaction patterns, graphics

**03**

### DEVELOP

AI-assisted implementation and functional prototypes

**04**

### REFINE

Review, targeted iteration, accessibility, verification

## THE ROLE OF AI

AI supports implementation and experimentation. Design judgment, creative direction, usability, collaboration, and quality control remain central.

Four functional demos / Reusable components / Iterative design-led workflow
